THE BUSINESS MODEL CANVAS

Cost Structure

- Fixed Costs: baseline expenses required to establish and maintain the platform, AI model development and training, cloud hosting and server infrastructure, salaries for AI engineers, software developers, and medical consultants, as well as ongoing data security, compliance, and system maintenance measures.
- Variable Costs: system usage and volume of medical image analysis, cloud computing charges for image processing, storage costs for patient data.
- Operational Costs: hospital onboarding and training programs, technical and clinical support services, continuous software upgrades, dataset expansion, model retraining, and bug fixes.

Revenue Structure

- Primary Revenue Streams: integration and licensing with hospitals, per report / collective charges on reports
- Secondary Revenue Streams: premium features, subscription-based licensing, advanced diagnostic analytics, automated medical reporting, disease trend analysis, and integration with hospital information systems (HIS/PACS)
- Future Revenue: usage based fee structure partnerships with pharmaceutical companies, research institutions, and government healthcare programs
